

One Ecosystem. Complete Execution.

The AI Workforce Infrastructure for Modern Businesses

BUILD

PMX

AUTOMATION

TEAMS

Business execution is fragmented, slow, and expensive

9+

apps juggled per worker

Knowledge workers switch between nine or more tools daily — nothing talks to each other. (Asana)

60%

of work time lost to 'work about work'

Coordination, status-chasing, and duplicated effort crowd out skilled work. (Asana Anatomy of Work)

\$80K+

average cost per specialist hire

Scaling in-house tech talent is slow and expensive; agencies add markup and delay. (U.S. BLS / Glassdoor)

70%

of transformations fall short

Most digital transformation programs miss their goals — too complex, too fragmented. (McKinsey)

The result: these inefficiencies compound — reducing productivity, inflating operating costs, and slowing every decision. Businesses don't need another tool. They need a unified execution layer.

THE SOLUTION

Introducing STAROX — one AI-powered operating system for execution

The future of work is Humans + AI Agents + Automation + Expert Teams — working together, not against each other. STAROX delivers the complete execution lifecycle in one ecosystem: build, manage, automate, and scale from a single platform.

B

STAROX BUILD

AI product development — turn ideas into websites, SaaS, dashboards & MVPs by describing what you need.

P

STAROX PMX

The intelligent command center — project management, analytics, BI, and AI execution insights in one place.

A

STAROX AUTOMATION

AI-powered workflows across CRM, sales, support, HR & ops — cutting manual work by up to 70%.

T

STAROX TEAMS

On-demand expert workforce — dev, design, marketing, ops & product, without the overhead of hiring.

Four products. One data layer. One subscription to execution.

A continuous execution loop

🔄 **Insights feed the next cycle:** every project makes the platform smarter — driving faster builds, leaner operations, and compounding business growth.

Why STAROX wins

Traditional businesses stitch together multiple vendors to build, manage, automate, and scale. STAROX replaces the entire stack.

Business Need	Traditional Solution	With STAROX
Product development	Development agency — slow, high markup	BUILD — AI-powered delivery in weeks
Project management	Jira / ClickUp — siloed from delivery	PMX — execution + insight in one
Analytics & BI	PostHog / Mixpanel — extra tool, extra cost	PMX — built-in intelligence
Automation	Consultants & point tools — fragile, costly	AUTOMATION — managed AI workflows
Execution teams	In-house hiring — slow, high overhead	TEAMS — experts on demand

Integrated by design — one data layer, one vendor, one price. Switching costs compound as customers adopt more modules.

A trillion-dollar shift toward AI-powered execution

TAM \$1.5T

Total addressable market — combined 2030 forecasts for AI software, managed services, custom software development, hyperautomation & PM software. (ABI Research, Grand View Research)

SAM \$58B

Serviceable market — AI-powered execution platforms & services for startups, SMEs, and agencies in our launch geographies.

SOM \$290M

Obtainable market — ~0.5% of SAM captured within 5 years via focused GTM across BUILD, AUTOMATION, TEAMS & PMX. (StaroX estimate)

Market figures are third-party 2030 forecasts — full citations on the Data Sources slide.

What STAROX changes for a customer

70%

less manual work

AI automation across CRM, sales, support, HR & operations workflows

3–5×

faster product delivery

MVPs and platforms shipped in weeks with BUILD, not months with agencies

40–60%

lower execution cost

TEAMS replaces full-time specialist hires and agency markups

5+ → 1

tools consolidated

PM, analytics, BI, automation & staffing collapse into one platform

20 hrs

saved per team / week

Coordination, reporting and status-chasing handled by PMX AI

100%

execution visibility

One live source of truth from plan to performance

StaroX targets, benchmarked against published automation-ROI research (McKinsey, Asana, Gartner) — see Data Sources slide.

Three engines: services, SaaS, and retainers

1

BUILD — Project-based services

Custom software, websites & MVP development — high-margin cash generator from day one

2

AUTOMATION — Projects + care plans

AI automation builds with recurring maintenance & optimization plans

3

PMX — SaaS subscriptions

Per-seat / per-workspace recurring revenue with usage-based AI add-ons

4

TEAMS — Monthly retainers

The wedge: services fund growth today; SaaS + retainers compound recurring revenue tomorrow.

Target revenue mix at scale

■ Services (BUILD + AUTOMATION) ■ SaaS (PMX) ■ Retainers (TEAMS)

Who we serve — and what they buy first

Startups

Build MVPs and ship faster

Entry: BUILD → expands to PMX + TEAMS as they scale

SMEs

Digital transformation & automation

Entry: AUTOMATION → expands to PMX + retainers

Agencies

White-label execution capacity

Entry: TEAMS → expands to BUILD overflow delivery

Enterprises

AI, analytics & execution optimization

Entry: PMX pilots → expands to platform-wide deployment

Beachhead: startups & SMEs — fastest sales cycles, highest pain, natural expansion path across all four modules.

Land with services, expand with the platform

1 Land

Revenue-first services motion

- Founder-led sales + outbound to startups & SMEs
- Content, SEO & AI-community presence
- Fast, visible BUILD & AUTOMATION wins

2 Expand

Convert delivery into subscriptions

- Every services client onboarded to PMX
- TEAMS retainers attached to delivered products
- Referral & case-study engine from wins

3 Scale

Platform & partner distribution

- Agency white-label partnerships
- PMX self-serve + product-led growth
- Enterprise pilots & global expansion

Where we are today

Milestones achieved

Brand established and business registered

PMX architecture designed; BUILD prototype completed

Automation framework and TEAMS delivery model defined

Service offerings, pricing and GTM strategy finalized

Current focus — next 12 months

Customer acquisition — First 20+ paying BUILD / AUTOMATION clients

Product development — PMX beta live with design partners

Revenue growth — Recurring retainers layered on project wins

Platform expansion — Unified data layer across all four modules

Pre-revenue → revenue: services pipeline opens immediately at launch, funding platform development without heavy burn.

Four phases to the execution OS

Each phase is revenue-generating — the roadmap is funded by execution, accelerated by investment.

The operating system for modern business execution

Today, businesses buy software. **Tomorrow, businesses will subscribe to execution.**

AI Agents

Automation Systems

Product Development

Analytics

Managed Teams

— *accessible to every company, through a single ecosystem* —

Build products. Manage execution. Track performance. Automate operations. Deploy expert teams. All from one platform.

Data sources & assumptions

Figure used in this deck	Source / basis
Managed services market — \$731B by 2030	Grand View Research, Managed Services Market Report (14.1% CAGR, 2025–2030)
AI software market — \$467B by 2030	ABI Research, AI Software Market Size 2024–2030 (25% CAGR)
Custom software development — \$146B by 2030	Grand View Research, Custom Software Development Market Report (22.6% CAGR)
Hyperautomation market — \$119B by 2030	Grand View Research, Hyperautomation Market Report (16.5% CAGR)
Project management software — \$20B by 2030	Grand View Research, Project Management Software Market Report (15.7% CAGR)
60% of work time on 'work about work'	Asana Anatomy of Work Global Index (10,000+ knowledge workers surveyed)
~9 apps juggled per knowledge worker	Asana Anatomy of Work Global Index
~70% of digital transformations fall short	McKinsey & Company digital transformation research
\$80K+ average specialist hire cost	U.S. Bureau of Labor Statistics & Glassdoor salary data for software/tech roles
SAM (\$58B) and SOM (\$290M)	StaroX estimates: segment share of TAM in launch geographies; SOM ≈ 0.5% of SAM in 5 years
Impact metrics (70% less manual work, 3–5× faster, 40–60% savings)	StaroX internal delivery targets, benchmarked to published automation-ROI studies (27–40% cost savings reported across hyperautomation deployments)

Market figures are third-party 2030 forecasts and may vary across research firms; StaroX estimates are clearly marked and will be refined with live customer data.

**Build Faster. Automate Smarter.
Execute Better. Scale Without Limits.**
